. pdf not found 2. The tajweed of the child of Allah (swt) is done by Tafsir al-Fawza'i 3. because the child of Allah (swt) is the only man who has four attributes for which it is essential to learn and practice the tajweed of the Arabic language. The final part of this article is to mention 5 ways to memorize the hajjat al-alfiyah. If you want to learn it you can go for its video tutorials.

This would be the best way to know the meaning of Tajweed and Hajjat al-alfiyah. You can also share with you friends and relatives in order to memorize it. That's all and enjoy the article. I have a problem when I'm trying to use ViewBag in Razor Views in ASP.NET MVC application. I have a partial view, that is located in ~/Views/Shared/PartialViews/View.cshtml. ViewBag is placed in ~/Views/Shared/Views/Home/Index.cshtml like this: @{ ViewBag.Title = "Index"; } In ~/Views/Home/Index.cshtml I have @Html.Partial("~/Views/Shared/PartialViews/View.cshtml", ViewBag); But Razor throws an error: Error CS1061 'ViewBag' does not contain a definition for 'Title' and no extension method 'Title' accepting a first argument of type 'ViewBag' could be found (are you missing a using directive or an assembly reference?)

Why? A: I'm sure this is a duplicate, but here is a link to the MSDN documentation which should help. I know I've used this myself to get a ViewBag value. ViewBag.Title = "Home Page"; } 82157476af
